INVESTIGATION FILE / RESTRICTED ACCESS

Light on the Second Floor

F06 · Fictional documentary photograph. No tiny details required.

CASE 26–1047
Suspicious death • Investigator access only
Opened: 15 September 2026
Working copy 03 • 16 September 2026, 09:00

Issuing officer: Inspector Yael Dagan
Assignment: independent review of the evidence

Instructions: read the dossier, investigate the workstation and submit a supported conclusion. Supplemental records are on the computer. No outside specialist knowledge is required.

All people, organisations and events in this game are fictional. This is not an official document.

26–1047 / P02

INVESTIGATOR COPY • 16.09.2026

Investigation assignment

Opening memorandum • 16.09.2026 / 09:00

Eyal Shalev, 46, a records audit consultant, was found dead in reading room 204 at the Municipal Records House, 8 Vine Street. The security officer reported the discovery at 21:07 on 14.09.2026. The first patrol arrived at 21:14.

Shalev had been reviewing use agreements and storage areas. His report was due before the audit committee the following morning. A financial irregularity must not be assumed to explain a death without evidence.

Your task: establish what happened, who was responsible, motive, timing and method, and the evidence supporting your account. Separate witness claims from verified records.

Sources: this printed dossier contains the opening material. The workstation has Files, Mail, Messages, Investigation Records and a Notebook. All materials are accessible from the start. Search within an app searches only that source.

Record theories in the notebook and bookmark evidence. A bookmark does not certify an interpretation. Cite evidence IDs in your final report. Motive alone is insufficient.

First response report

P03 • Sergeant Tamar Erez • 14.09 / 22:10

21:14 — Entered through the main door with guard Yossi Tal. He was sent to check S1 access for another response team, briefly exiting and returning with his badge at 21:15. Room 204 was unlocked. No forced entry.
21:16 — Medical responder confirmed death. Only emergency personnel were permitted upstairs.
21:21 — Service access secured; those present separated.

The body lay beside the reading desk. One chair was displaced; a brass bookend lay on the floor. No evidence of a violent search. The victim’s phone was on the desk, wallet in his pocket. The window was closed from inside. It offers no exit without climbing equipment.

The guard saw Shalev working at 19:50. He did not patrol the floor again until 21:07 and cannot account for arrivals during that interval.

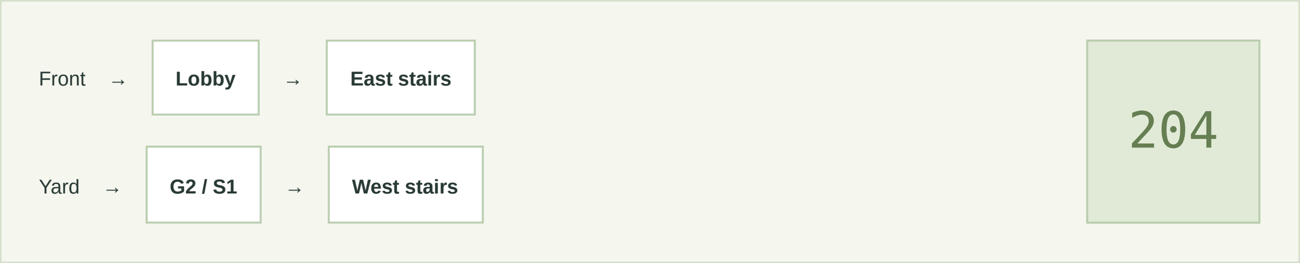
Fire alarm review: no emergency exits opened. The ordinary service passage is not an emergency exit and does not trigger that alarm. These systems must be distinguished.

Scene photographs F01 and circulation plan P04 are attached. The stairwell camera was out of service that evening; there is no interior footage of the floor.

F01 · Fictional documentary photograph. No tiny details required.

Access and circulation plan

P04 • Site survey • Not to scale



Public route: Vine Street → main entrance → lobby → east stairs → room 204.
Operational route: rear yard → service door S1 → service alcove → west stairs → room 204.

S1 has badge readers on both sides, so normal entry and exit record the badge ID. An emergency release is always available and separately logged; it was not used that evening. Public access closes at 20:15; service access remains active.

The yard has a vehicle gate G2 with a mechanical lock. Camera G2 covers only the gate. The pedestrian gate uses the same key. G2 keys are kept in individual drawers in the guard room; the issue log is in Records.

S1 to 204 takes 80–100 seconds at normal walking pace. The guard desk is 26 metres from the service alcove behind frosted glass. A trolley and clothing colour can be observed, but faces cannot reliably be identified.

Rear photograph F02 shows S1 and the trolley. It was taken the following morning and cannot establish who stood there that evening.

F02 · Fictional documentary photograph. No tiny details required.

INVESTIGATOR COPY • 16.09.2026

Preliminary medical summary

P05 • Dr Naama Raz • 15.09 / 08:20

Identity: Eyal Shalev. Preliminary time of death: 20:25–20:50 on 14.09. This is a broad estimate, not a precise clock.

Cause of death: one blunt impact to the head. Injury geometry is compatible with the corner of a heavy metal object. There is no finding supporting poisoning or natural death. The assailant’s dominant hand cannot be established from the injury.

A blue fibre was found in the victim’s hand. Such fibres occur on the service trolley and common work jackets in the building. Colour correspondence alone does not identify a person.

A fresh gripping mark appears on his shirt sleeve. Contact shortly before the injury is possible. It cannot establish whether the preceding conversation was planned.

Object A03 was submitted to the laboratory; supplementary finding F03 is on the computer. Combine the opinion with site records and statements. Do not narrow the death window using this estimate alone.

INVESTIGATOR COPY • 16.09.2026

Statement: Maya Ronen

P06 • Facilities manager • 15.09 / 00:20

“I handle maintenance, suppliers and service vehicles. Eyal asked again for the storage files. I said we could review them in the morning. He sometimes treats administrative mistakes as deliberate acts.

I left my office at 20:10 and drove my own car out of the front car park at about 20:16. I did not return to the building. I drove straight home. I bought nothing en route and have no receipt. I live alone.

I used the blue trolley before eight to move boxes downstairs, then returned it to the service alcove. I did not check what was on it. People sometimes leave jackets there.

U-12 is allocated to me for work, though others may request it. The yard key was my responsibility that day. I do not recall giving it to anyone.

I did not know about the reader clock fault. I know the lobby closed at 20:15. I have no information about later arrivals.”

Statement read back and approved. Recorded as a claim; the homeward route was not verified at this stage.

INVESTIGATOR COPY • 16.09.2026

Statement: Amir Sade

P07 • Maintenance technician • 15.09 / 01:05

“I left my work jacket on the trolley in the service alcove at about 19:45. Badge A17 was in its pocket. When I came back at 19:55 the trolley was gone. Maya said she was taking boxes downstairs.

I couldn’t wait. I left through the still-open lobby at 20:02 and caught bus 42 by the clinic. My phone was charging in the workshop. My travel ticket is the only way I can show where I went.

Eyal reminded me about a personal debt of 1,800 shekels and said we would talk on Thursday. I was angry, but it has nothing to do with his work. I did not threaten him.

I returned at 21:15 after a neighbour called my sister. Police were already there. The jacket was on the service alcove shelf, badge in the pocket. I don’t know who used it.”

A17 was seized at 21:19. The journey claim was sent for checking. Reader logs identify a badge, not necessarily its holder.

INVESTIGATOR COPY • 16.09.2026

Statement: Dana Lev

P08 • Archive registrar • 15.09 / 01:40

“Eyal and I used to be married. We separated two years ago. We argued last week about selling the flat; that is no reason to hide our call.

I left at 19:40 for rehearsal at the community theatre. I called him during a break. The call started at 20:29 and ended at 20:38, according to my phone. I stood in the corridor by the auditorium entrance.

He said someone had come to speak to him. I heard a scrape and then a heavy impact at about 20:37. I thought a box had fallen. He stopped responding, and eventually the line disconnected. I tried twice more. I heard no name and recognised no other voice.

At the start he said he would not alter the area schedule just because someone insisted. I did not ask who. He did not mention amounts.

I did not return to the archive. You can check the theatre foyer camera.”

The estimated impact time is not a forensic measurement. Her location and the call records require verification.

26–1047 / P09

INVESTIGATOR COPY • 16.09.2026

Statement: Niv Harari

P09 • Deputy director • 15.09 / 02:15

“Yes, I sent Eyal an unpleasant message. I authorised temporary room use without completing the paperwork. That could cost me my job. I wanted a week to put the file right, not erase facts.

I left the municipal building at 20:14 and went to the square café. I met a staff-union lawyer at 20:22 and stayed until about 20:52. Check the till and camera.

Maya asked me to sign off an Oran supplier payment. I did not sign. The billed area didn’t match what I had seen. I sent Eyal the question at midday without telling her.

I have never had a yard key. I don’t hold a valid driving licence. My badge opens only the main entrance.

I don’t claim to be organised. I do ask that you distinguish administrative negligence from what happened in that room.”

Correspondence M04 was preserved after interview. Meeting verification is in R04.

INVESTIGATOR COPY • 16.09.2026

Seizure and custody register

P10 • Signed 15.09 / 03:10

A01	Victim’s phone	Desk 204	21:32	Bag 711
A02	Laptop	Desk 204	21:36	Bag 712
A03	Brass bookend, 1.6 kg	Floor 204	21:39	Bag 713
A04	Blue fibre	Victim’s hand	22:05	Envelope 714
A05	Badge A17 and work jacket	Service alcove shelf	21:19	Bag 709
A06	Key ledger copy	Guard room	22:20	Envelope 715

Times above are seizure times on the police clock, not times of use.

A03 reached the laboratory at 06:45 on 15.09. A01 and A02 received authorised logical extraction. Unrelated personal content was omitted from the investigator workstation.

A17 is assigned to Amir Sade; it is not biometric identification. A badge event cannot establish a person’s presence without supporting evidence.

The trolley photograph was taken after the jacket was seized. Its yellow replacement wheel identifies the trolley only.

Accounts appendix submitted for review

P11 • Invoice OS–184 • 09.09.2026

Supplier: Oran Site Services • Vendor 441
Client: Municipal Records House, Nahal Rimon
Service: storage clearance and organisation, August 2026
Billed area: 180 m² × ₪240 = ₪43,200
Facilities approval signature: M. Ronen
Management approval: pending

Eyal Shalev’s handwritten note: “Cross-check room measurement, interest declaration and revision 3. Do not submit for payment before clarification.”

Survey appendix: B1 — 36 m²; B2 — 24 m²; no other rooms in the order. The original commission authorised only those two rooms.

Supplier declaration and audit draft are in F04 and F05. This dossier contains no confirmation of payment. An attempt to authorise payment is not proof that funds were transferred.

Earlier revisions may indicate an innocent mistake or a repeated pattern. Check the source of the figures.

26–1047 / P12

INVESTIGATOR COPY • 16.09.2026

Statement: evening guard

P12 • Yossi Tal • 15.09 / 00:45

“At 19:58 I saw Maya with the blue trolley, the one with the yellow wheel. A blue jacket was on it. I recognised her while we spoke at the desk, not from a distant glimpse. She asked to keep the yard key until morning.

I locked public access at 20:15. I use my phone clock. Through the front window I saw her private car leave at 20:16.

At about 20:40 I saw the same trolley through the frosted glass in the service alcove. Someone in a dark jacket was pushing it. I saw no face and cannot say whether it was a man or woman. I thought they came down the west stairs but did not see the whole route.

I heard the yard gate close at about 20:49 and did not investigate. When I went upstairs to switch off lights at 21:07, I found Eyal.”

Do not attribute an identification the witness did not make. An approximate time is not an exact second. Key details were checked against A06; camera records are in R03.

26–1047 / P13

INVESTIGATOR COPY • 16.09.2026

Clock comparison report

P13 • Systems technician Ruth Peleg • 15.09 / 07:30

Reference: synchronised police clock. S1 controller has been offline from network time since 12.09. No clock change occurred during the incident evening.

Test A — reference 15.09 07:00:00; S1 display 07:07:40.
Test B — reference 15.09 07:10:00; S1 display 07:17:40.
Saved maintenance test — reference 14.09 18:00:00; S1 display 18:07:40.

The offset is constant across all three measurements. Establish the direction of correction before comparing against other sources.

G2 camera: less than two seconds drift.
Mail server and call log: synchronised.
Bus, café and theatre records: verified within five seconds.

R01 displays original S1 values without correction. There is no badge-reading fault. Calibration cannot identify who carried the badge.

Digital signature retained in the evidence system. No outside search or technical standard knowledge is necessary.
